COMMENTARY ON FLOWERING:

- 1 This timing is indicative of Queensland/NSW/NT. Flowering in other states (Vic, SA, Tas & WA) is likely to be up to 2 months later.
- 2 This represents the range of flowering not every plant will be in flower during this period and a plant is more likely to be in flower in the middle of the indicated range.
- 3 A plant is likely to flower longer if older/more mature.
- 4 The first flowering season of a young aloe may vary significantly from the indicated flowering season of that cultivar at maturity (eg. differ to that shown above).
- 5 Changes in weather patterns are likely to influence flowering time (eg. early summer rain can bring this forward). 6 Certain cultivars (eg Copper Shower, First Gold and Ivory Dawn) flower multiple times over the indicated period.
- Duauthorised commercial propagation or and sale, conditioning, export, import or stocking of propagation material of these varieties is an infringement under the Plant Breeder's Rights Act 1994. TM These trademark names are claimed by Aloe-Aloe Horticulture Pty Ltd and are not the cultivar names. The botanical and cultivar names are shown in brackets. Aloe Hybrid 'LEO 5392' and Aloe Hybrid 'LEO 8552' are being test marketed under section 45(6) of the Plant Breeders Rights Act 1994 and full protection under the Plant Breeders Rights Act 1994 is intended.
